1. INTRODUCTION

1.1. THE BIRTH OF THE GLOBAL STANDARDS SYMPHONY HALL IN VILNIUS

Vilnius is the capital of the Republic of Lithuania and the center of cultural life in Lithuania. The city is home to the key professional musical culture establishments such as the Lithuanian National Philharmonic Society, the Lithuanian National Opera and Ballet Theatre and the Lithuanian Academy of Music and Theatre. Vilnius is also home to Lithuania's two key symphony orchestras, the Lithuanian National Symphony Orchestra and the Lithuanian State Symphony Orchestra. Vilnius currently lacks a concert hall suitable for symphony music complying with the global standards applicable to the natural acoustics of such venues and having a capacity of at least 1,500 seats. For these reasons, Lithuanian professional music teams do not have an opportunity to present their art of performance to the Lithuanian audience at the premium level, and the infrastructure of concert halls available in

Lithuania does not satisfy the requirements normally applicable under international standards. In 2017, the Government of Lithuanian Republic approved the Plan for the implementation of the Governmental program. The need for a National Concerts Hall, that would correspond to the global standards for the musical hall, was listed there. In 2018, the Minister of Culture of Lithuania and the Mayor of Vilnius City signed an Agreement of Intent to create the infrastructure for all the services that a National Concerts Hall should provide. An exceptional spot in Vilnius - the top of the Tauras hill, V. Mykolas Street - was selected as the most suitable location for the National Concerts Hall. The municipality of Vilnius launched the National Concert Hall international open competition on 18th of February, 2019.

1.2 THE GOALS OF THE PROJECT

To find the best architectural and planning solutions for the National Concert Hall and the surrounding area, taking into account the urban and natural conditions of the venue;

To find an exceptional, outstanding, original design in terms of artistic expression and architectural concept;

To ensure functional communications and acoustic solutions satisfying the requirements for an open multifunctional art center, featuring premium classical music concert hall with natural acoustics, and a residing orchestra;

To find the best solutions for the organization of transport, pedestrian and cyclist flows for the surrounding area.

1.3 EVALUATION CRITERIA

The evaluation criteria are listed below. The order of the criteria listed does not reflect any priority:

- Overall concept and architectural expression
- Urban qualities
- Architectural quality and originality
- Organization of the room program and Functionality
- Acoustic quality of the Grand Hall
- Potential to implement the project in the given economical frame; potential of ecological and environmental performance

The acoustic quality of the Grand Hall is of paramount importance. The jury will give special attention to the potential of the project to ensure the high acoustic quality of the Grand Hall.

1.4 UIA ENDORSEMENT

This one stage project Competition is endorsed by the International Union of Architects (UIA) was conducted according to the UNESCO Standard Regulations for International Competitions in Architecture and Town Planning and the UIA best practice re- commendations (See: Competition Guide for Design Competitions in Architecture and Related Fields)

Competition <http://www.uia-architectes.org>

1.5 LEGAL FRAMEWORK

The International architectural design one stage project Competition for the National Concert Hall in V. Mykolaičio Putino St. 5, Vilnius (hereafter referred to as “the Competition”) was implemented according to the Law on Public Procurement, the Design Competition Organization Rules (hereafter “the Rules”) approved by Order No. D-671 of 22 August 2017 of the Minister of the Environment of the Republic of Lithuania, the Civil Code of the Republic of Lithuania, other legal acts regulating public procurement Competition.

This competition was organized as an international procurement.

The main terms used are defined in the abovementioned legal acts and in the procurement documents.

There was no preliminary informational announcement about the Competition.

The Contracting Authority will not do a voluntary ex ante transparency announcement.

The Competition was announced via CPP IS and The Publications Office of the European Union.

The Competition was implemented in accordance with the principles of equality, non-discrimination, mutual recognition, proportionality, transparency and confidentiality requirements.

1.6 QUALIFICATION REQUIREMENTS

The Competition was open to architects from all countries. Eligible architects must be qualified for architectural practice in their respective countries.

Natural and legal persons, other organizations, their branches or a group of such persons, operating under the contract of partnership, could participate in the Competition. It was not obligatory to set up a legal person if a group of entities wanted to submit a project. People that cannot participate in the Competition or assist to the Competitors: specialists, people involved in the making of the competition brief, members of the Technical Committee, Jury members, members of PP Commission and their close relatives, employees, colleagues, employed by the same employer, employers.

Mindaugas Pakalnis

architect / Vilnius City
Municipality City's
Development Department,
Deputy

Date of competition submission deadline
was originally planned on June 25th, 2019

According to the Q&A the submission deadline
was changed on July 2nd, 2019

2. JURY SESSION

2.1 EVALUATION PROCESS

The jury session took place on July 23rd, 24th and 25th in Vilnius. Before and during the jury session the jury visited the site and points in Vilnius from which the site is particularly visible.

According to the report of the technical committee:

- 248 entries were submitted before the deadline
- the models of two entries as well as the identification envelopes of two other entries were missing.
- Some entries did not fulfil all the presentation requirements (missing visualisations or sections)
- Some projects did not respect the height limit or went over the implantation perimeter or deliberately changed the construction site.

The jury took note of the of the report of the technical committee and its remarks on each project.

The jury decided that all entries could be evaluated on the basis of the submitted material despite missing graphical presentations and tolerated all derogations concerning the

2.1 EVALUATION PROCESS

construction perimeter and the building height considering that derogating propositions contributed to a better understanding of the site.

All 248 submitted entries were admitted by the jury to the evaluation process.

In order to compare the economy of the projects the technical committee reported that the average total area was 16'416m² and the average footprint 7'132m².

The jury examined all projects according to the evaluation criteria set in the brief. The jury worked as one undivided group. The evaluation of all projects was done in the presence and with the contribution of all jurors.

The evaluation process was conducted with successive evaluation rounds dismissing each time the less good projects in order to identify the short-listed projects which were analysed and discussed thoroughly also together with the specialists.

The model of each entry was inserted in the big model when discussing the project.

FIRST ROUND

In the first round 115 projects were dismissed for one, more or all of following reasons:

- missing clarity of the overall concept
- inadequate scale of intervention and integration in the site
- complicated volumetric composition
- missing architectural quality

Following projects were dismissed at the first evaluation round:

17	mj1951	216	wv1111	138	vc1947	250	al0836	61	zz1208	195	ak5819	245	av4541

FOURTH ROUND

In the fourth round 25 projects were thoroughly examined.

Special focus was given to following aspects:

- adequacy of the overall concept
- integration in the site
- architectural quality
- functional aspects
- visitor friendliness, quality from the user point of view
- potential of the halls to meet the acoustic requirements
- potential to become a landmark for Vilnius

79	ac2642	184	ch1001
126	ag7953		

FIFTH ROUND

After discussing the 25 projects again the following 12 projects were confirmed as the short-listed projects

CONTROL ROUND

Before discussing the short-listed projects, the jury undertook a control round and made some minor

readjustments of classification, the results of which are integrated in the previous description. In addition to the common control round all jury members were given the opportunity to visit individually the 248 exposed projects to make sure that no good project was unjustly dismissed in previous rounds.

No corrections were proposed.

SIXTH ROUND / SHORT LISTED PROJECTS

The 12 short listed projects were again analysed and discussed together with the experts (heritage, acoustic, conductor) focusing in particular on following aspects:

- heritage aspects
- potential of the halls to meet the acoustic requirements
- quality from the user point of view
- economy of the project
- aspects of sustainability
- potential to become a landmark for Vilnius

After reading loud the reports the authors of the shortlisted projects had submitted, the jury verified several declarations of the authors and discussed the qualities of the short-listed projects.

The jury classified the short-listed projects in two groups:

Middle group 8 projects:

zm8737, xy0609, yq7666, 2t01n9, 4h883l, pi3141, ki4833, ac2642

Upper group 4 projects:

vl1397, sl0975, mm0070, ni2220

Then the jury ranked the 12 short listed projects, allocated the three prizes and decided to give one honourable mention. There was unanimity for the ranking of the short-listed projects and the prizes.

First Prize Tender number vl1397

Second Prize Tender number sl0975

Third Prize Tender number mm0070

Honourable mention Tender number ni2220

At this point the jury was divided in two groups, one was assigned to write the critics of the 3 prizes and the honourable mention while the other to rank all projects dismissed in previous rounds.

The critics were read and discussed in front of the projects and approved by the jury. For a better readability they are included with the documentation of the projects in chapter 3.

The ranking list was approved and signed by the jury. At the end of the jury session the jury formulated general remarks and recommendations.

2.2 PRIZES AND MENTIONS

The total prize money available was **EUR 120 000**.
Three prizes were, as announced in the brief,
attributed by the jury.

**The following sums will be paid to the
competition prize winners:**

First prize 60 000 Euros

to Tender number vl1397

Second prize 40 000 Euros

to Tender number sl0975

Third prize 20 000 Euros

to Tender number mm0070

A certificate for the Honourable mention

will be given to Tender number ni2220

The prize money will be paid in 30 days after the
final results of the Competition are announced.
Any possible taxes or charges on prize money the
winners might be obliged to pay in his/her country
shall be his/her responsibility and will not be
compensated by the Contracting Authority.

2.3 GENERAL REMARKS AND RECOMMENDATIONS OF THE JURY:

First of all, the Jury would like to thank the competition organizer for having launched an open competition permitting to architects from all countries and continents to participate.

Further, the Jury would like thank the competitors for all their effort and hard work. The many contributions overwhelmed and impressed us. The material delivered from countries from so many continents and countries all contributed to this important first step in creating the National Concert Hall in Vilnius. It is obvious that the New National Concert Hall in Vilnius is a very prestigious, challenging and attractive commission for many architectural offices from across the world.

The Jury is also impressed by the rich diversity of the many Architectural Concepts that were proposed for the Competition, even though the site and height restrictions in the brief gave certain limits to the ways the program could

2.3 GENERAL REMARKS AND RECOMMENDATIONS OF THE JURY

be organized. We believe that the city of Vilnius had received an even broader spectrum of creative solutions and different proposals if the brief had been more open in this regard. Some proposals offer interesting clues to what a wider set of constraints might have made possible.

Tauras Hill is a landmark in itself in Vilnius. The site is part of the park on Tauras Hill and as such the topography offers critical challenges to the success of the project. The site is very close to a number of important institutions, existing public transport routes and in walking distance to the old city. The Jury is convinced that there is no need for mechanized transport systems to the site, if the routes for logistics, pedestrian and cyclist flows are solved convincingly, like the winning project does, especially when the area south of the site, i.e. the former cemetery, is seen as equal to the area north of the site.

Between the proposals the Jury could recognize conceptual 'themes' in the way the program manifests itself on an urban level, the way the project is organized internally and the layout of the Concert Halls. Many proposals offered convincing solutions for some of these issues. The winning project had to be one that offered convincing solutions to all of these issues, in a coherent and self-explanatory way. The winning proposal had to be one that went beyond 'just' solving the requirements of the brief and addressed the incredible opportunity that this project offers for the city of Vilnius.

The first prize design is one for those typologies that offers the program in three legible volumes. The design stands out in the way the massing is contextually sensitive and as such reconnects the old cemetery to Taurus Hill. It opens up the upper part of the hill towards the city and the river in a very convincing way. The design of the three volumes and the new

2.3 GENERAL REMARKS AND RECOMMENDATIONS OF THE JURY

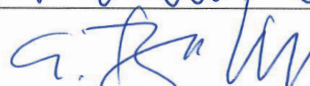

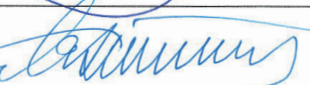

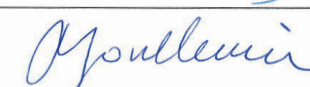

plaza provides a clear and fitting intermediate level of detail between the city and the interior spaces. The public interiors have a clear public spatiality to them, promoting interaction. The foyer spaces have a strong and fitting presence in the context and increases the area of public space. The design re-establishes the relationship between Tauras Hill and the New National Concert Hall on it, and other landmarks in the city. These qualities are of value to all inhabitants and visitors of Vilnius, also when the Concert Hall is not in use.

The Jury is convinced that the first price winner has proposed a solution that ensures functional communications and acoustic solutions that will satisfy the requirements for an open, multifunctional art centre, featuring a premium classical music concert hall with natural acoustics at which the

residing orchestra will be at home. The winning Architectural Concept clarifies the site and is an outstanding, and original design in terms of artistic expression. It will be a landmark and an attraction for Vilnius being the capital of the Republic of Lithuania and the Centre of cultural life in Lithuania.

The Jury recommends the Client to mandate the first prize-winner and develop the project further in order to fulfil the incredible potential of the Architectural Concept proposed for the National Concert Hall in Vilnius. A further landscape design competition has to guarantee the compatibility and coherence with the winning project. The landmark site of Tauras Hill demands an intense collaboration between architecture and landscape design.

Special remark

The identification envelopes were not opened by the jury president in presence of the juror's as usual in UIA competitions. According to Lithuanian public procurement law the envelopes were opened by the Public Procurement Commission. The jury asked the Lithuanian jurors to be present at that event.

12th of August the public procurement commission opened the envelopes and revealed the identity of the authors.

Town-planning concept

New Tauras Hill Park, a history of respect.

- a.- The outstanding situation of the existing building allows a unique visual from the city, but at the same time implies, in a project of these dimensions, an eminently horizontal profile . At the same time the building itself is like a wall that separates the park from the Old Evangelical Cemetery gardens.
- b.- To achieve a better slenderness in the architecture, and thinking in a more direct and clear connection between the park and the Old Evangelical Cemetery gardens it is decided to fragment the program into three pieces (Main Hall, Small Hall and House of the Nation) joining together by a base (plinth) that acts as a continuous foyer. In this way a new visual connection of the territory with the city through a new green corridor is generated. These pieces are modeled in a polygonal shape and are oriented by responding to the diagonal visuals that are generated from the different arrivals to the park. This polygonal structure establishes an interesting dialogue with some of the icons of the city such as Gediminas Tower, the communications tower, or so many others faceted buildings.
- c.- The project is completed with a simple solution by extending the old evangelical cemetery gardens to the base of the building as a garden roof, housing all the private uses of the complex. This operation generates a unique park as a result of the union of Tauras Hill and the Old Evangelical Cemetery gardens.
- d. - All the uses included in this continuous plinth are illuminated through a series of linear courtyards (patios) giving continuity to the existing sand paths of the Old Evangelical Cemetery gardens that currently end abruptly and steeply. This project seeks respect through integration and at the same time increases public space. The project is completely adapted to the building limits established in the program, since the existing parking space is kept covering this garden roof that does not modify or alter any of the values of the Old Evangelical Cemetery gardens, so the stained glasses are incorporated to the building.

Architectural concept

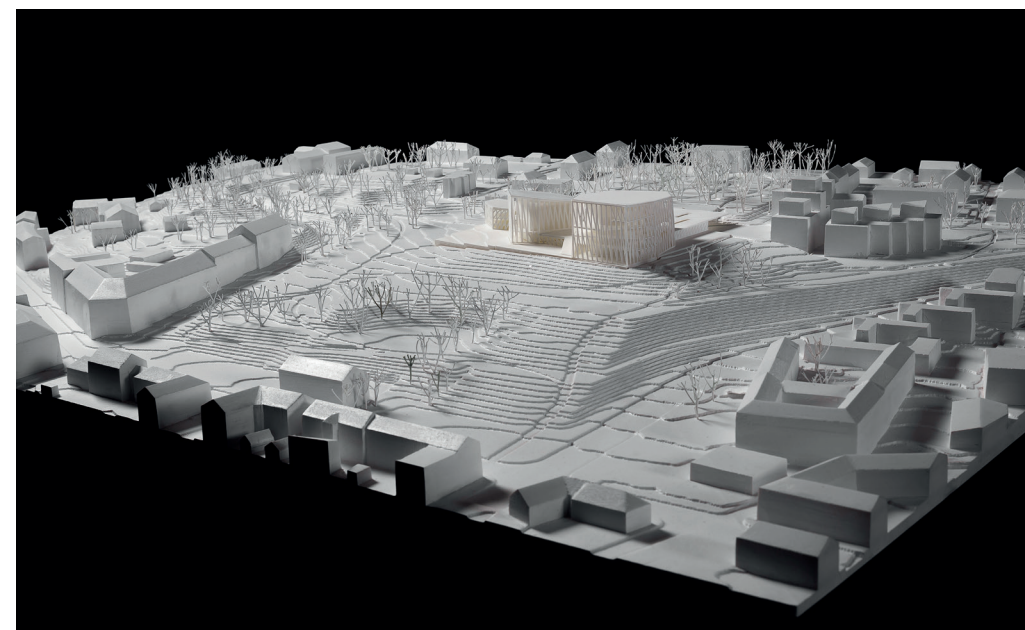

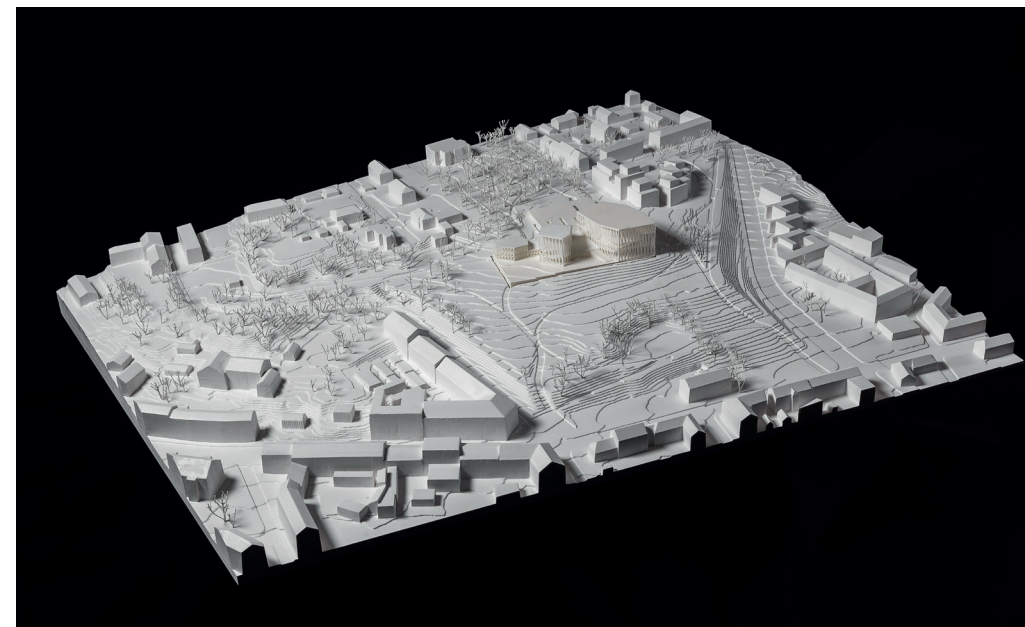

The concert centre will join together both tauras Hill Park and the Old Evangelical Cemetery gardens creating more than a building a urban solution. The program is divided in premises with low height requirements and the halls and cultural 'House of the Nation' that need higher volumes. Architecture just follow this needs creating a roof garden in continuity with the Old Evangelical Cemetery gardens level for the low premises, and a glass and wood envelope for the big ones. The building and Landscape together create a sense of drama when illuminated, a new Icon in the city as the light expands outside the Venue . The beautiful light of the sky during summer nights will enter smothely through north facade, creating a perfect and magical atmosfear for Music lovers.

MAIN HALL SEATING SPACES

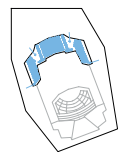

Groundfloor

First circle floor

Second circle floor

MAIN HALL CONFIGURATIONS

85 orchestra & 22 chors & additional back circle

Oratorio orchestra (21) & Singers & additional front circle

Theatre & Dance with orchestra pit

SECONDARY HALL CONFIGURATIONS

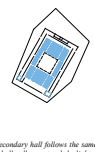

Flat type (550 seats)

Transverse Type (500 seats)

Arena Type (370 seats)

Conference rooms (400 seats)

Main Concert Hall

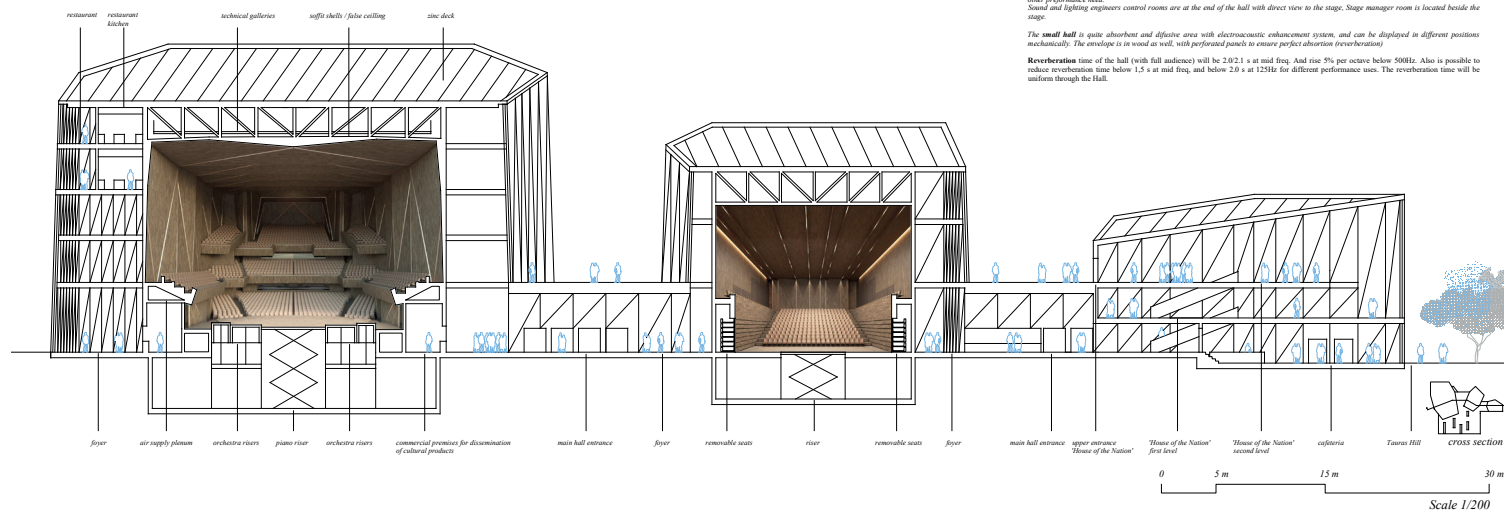

Acoustics

The main hall has an outstanding acoustic and versatility quality - the secondary hall follows the same idea giving consistent identity and allow cross-programming offering a change of scale and orientation. Both halls allow natural daylight come in, to ensure easy orientation and a powerful and unique image, but also sliding panels are designed to darken the spaces. The existing stained glass works are installed in this prominent position (fronced by acoustic glasses) recovering the importance they have in the site.

The 200 transformable seats are on flat surface near the stage, but the floor can be mechanically stepped (if required to create an orchestra Pit, or other performance need). Sound and lighting engineers control rooms are at the end of the hall with direct view to the stage. Stage manager room is located beside the stage.

The small hall is quite absorbent and diffusive area with electroacoustic enhancement system, and can be displayed in different positions mechanically. The envelope is in wood as well, with perforated panels to ensure perfect absorption (reverberation).

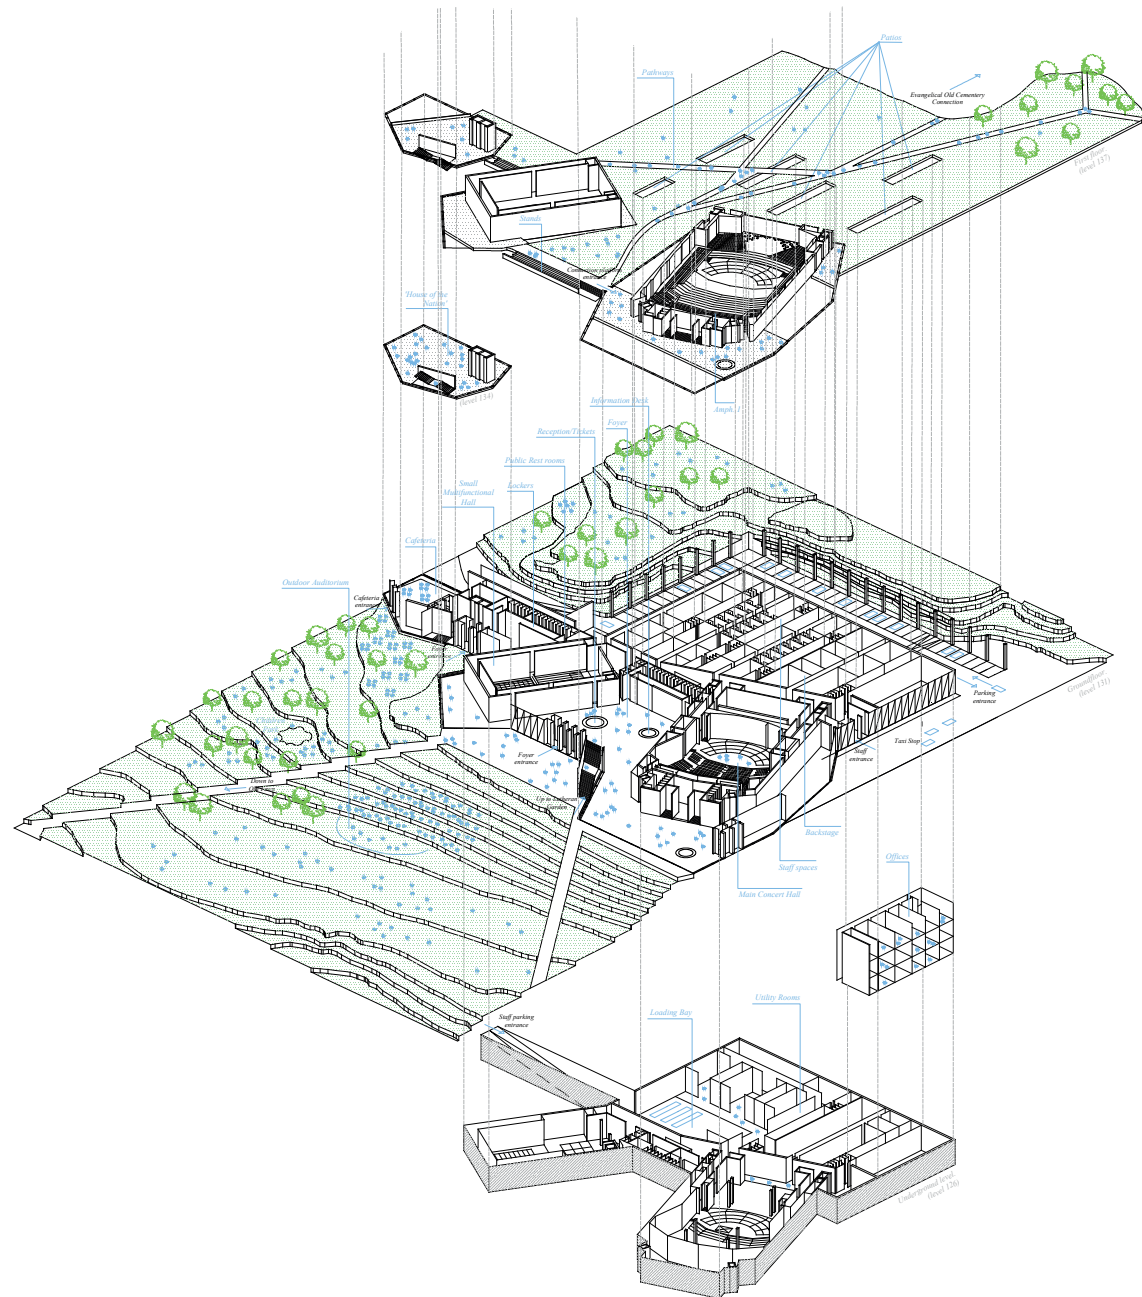

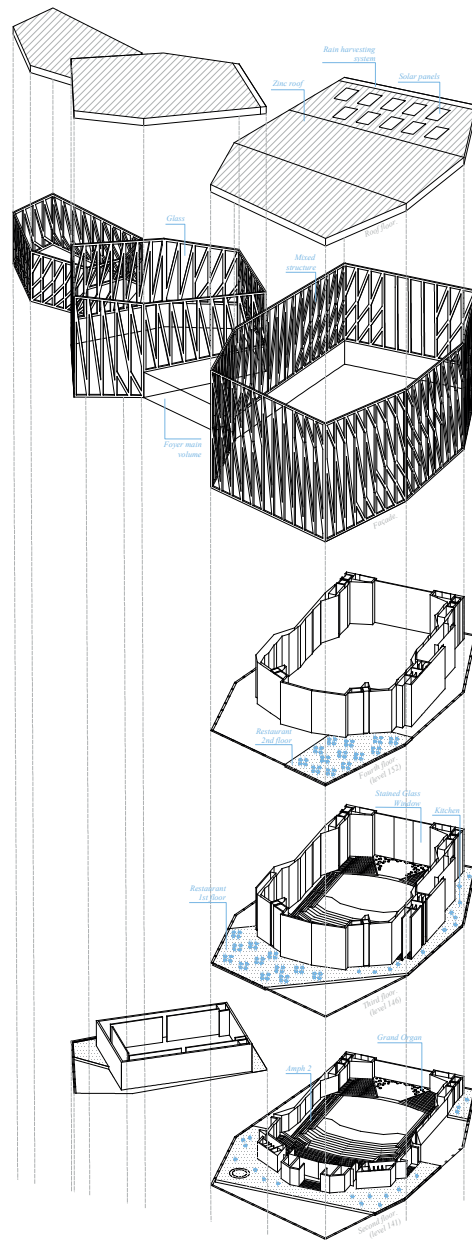

Reverberation time of the hall (with full audience) will be 2.0/2.1 s at mid freq. And rise 5% per octave below 500Hz. Also is possible to reduce reverberation time below 1.5 s at mid freq, and below 2.0 s at 125Hz for different performance uses. The reverberation time will be uniform through the hall.

TOWN-PLANNING CONCEPT

TAUTOS NAMAI

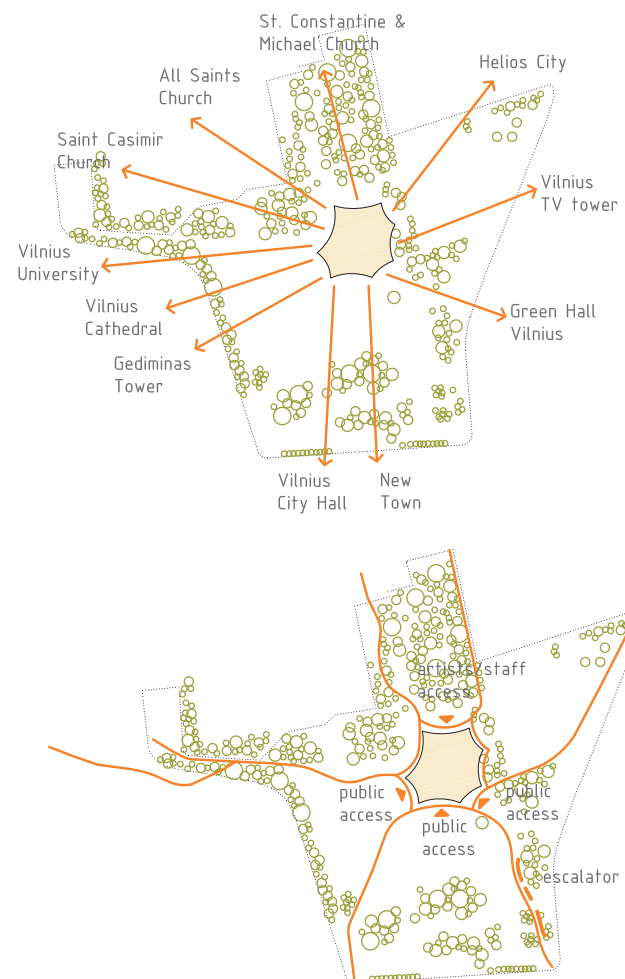

The Municipality of Vilnius intends to build on Tauras Hill the National Concert Hall of Lithuania, «Tautos Namai». This project is an opportunity to reflect on how the historical idea of the House of Nation can finally be materialized, and how it will start the architectural and urban transformation of a major site for the city, which will resonate nationally and worldwide.

The project aims to create a venue representative of our society's contemporary needs : its multi-functional and open character will be dedicated to art and culture on all scales.

At Vilnius' scale, it is a new landmark for the cityscape, a public-dedicated symbol which will open Tauras Hill to the whole city.

At the national scale, the House of Nation hosts the creation, promotion and diffusion of Lithuanian culture and identity.

Finally, at the international scale, it is meant to become a world-class acoustic venue for main classical orchestras, as well as a contemporary architectural icon.

ARCHITECTURAL CONCEPT

CONCEPTUAL APPROACH: INVITATION AND OPENNESS

A concert hall, like a theatre or an opera house, is an essential equipment for the life of a community. Their role in disseminating artistic works is indisputable, but their social role is no less so. They are places of grouping around very diverse works that interest all social categories, all ages. To fulfill this role it is necessary that these places be as accessible as possible, as open as possible. They must no longer appear as reserved, closed places, where we do not know what is really going on there, where artistic activity is akin to magic by denying all creativity and work.

Vilnius' National Concert Hall is thus first and foremost an expression of public culture, opened to everyone. The diversity of its activities is shared between the inhabitants, musicians, technicians and curious visitors from everywhere.

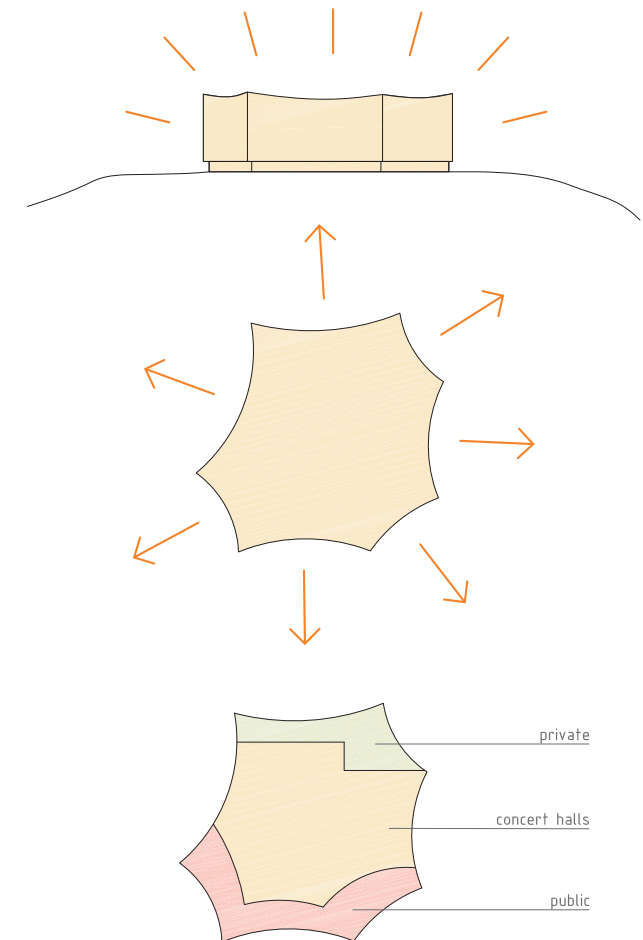

As such, it is meant to stand out as an expressive and functional venue, a new landmark acting like a beacon of light in the city.

Following a clear concept, the building adopts a very distinctive shape, offering a unique profile easily recognizable from all angles. Thought as an architectural landmark on top of the popular Tauras Hill, its concave facades are turned towards all directions and express an inviting feeling of welcomeness from every side. By the reflections on its skin during daytime and its lighting on evenings and nighttime, it becomes a radiant symbol for the institution.

This iconic multi-oriented shape materializes the dynamism, pluralism and openness of the National Concert Hall. From its exceptional location on top of Tauras Hill, it dialogues with other high spots in the city such as the Gediminas tower, while preserving the natural profile of Naujamiestis's slopes.

« The composer should have only one thought and one desire during the hour of creation »

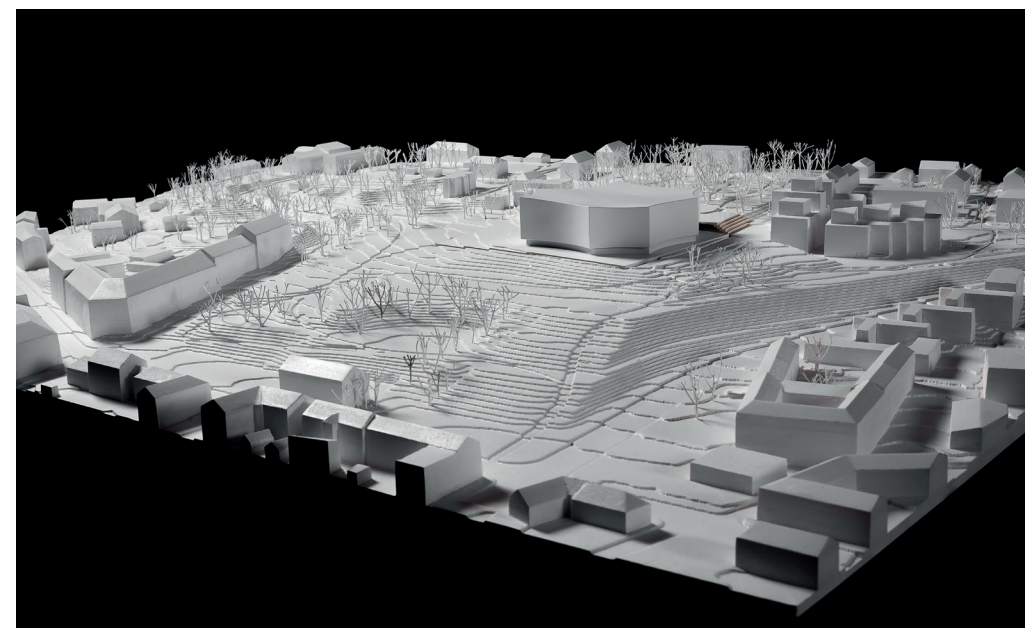

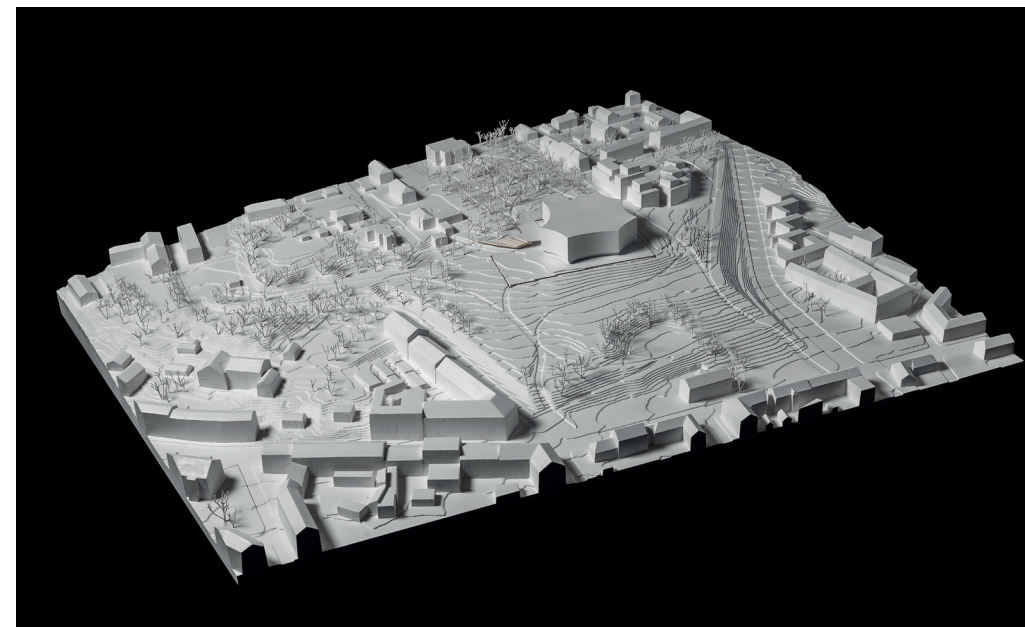

M.K. Ciurlionis, lithuanian composer and painter.

Urbanistic concept

Key words: Balance, Continuous Green

Volume in its new location shifts the urbanistic/landscape equation into balance, Tauro hill now plays an equal role in this composition. In consequence the volume sits closer to old town, thus Tauras hill park is moved emotionally towards Vilnius valley. Northern Tauras hill slope and former Evangelic cemetery park become one Green public space, there for connecting center valley with Naujamiestis.

It is worth mentioning that throughout the history objects of great importance to Vilnius city were situated alongside urbanistic axes, with a subtle exception for the Cathedral.

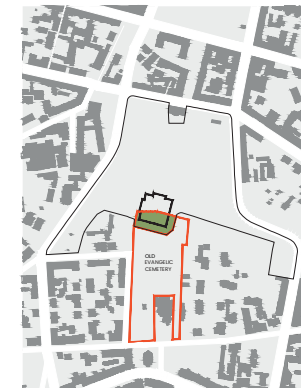

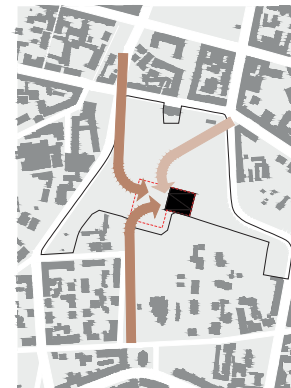

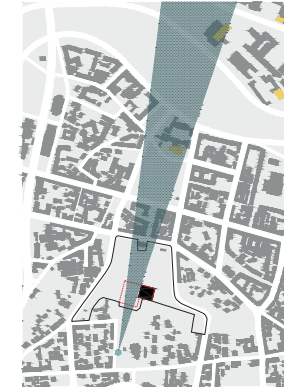

As new volume moves from existing Culture House footprint it also restores the hillside which was brutally damaged when constructing the Culture House. This green buffer gently separates National Concert Hall entrance space from former cemetery.

In the eastern side of the site new volume occupies only the space it needs and does not exceed height regulations.

Resituated new volume opens former Evangelic cemetery park towards Vilnius city panoramas.

Main bonus over required program is the new Tauras hill square – public space, fully representing importance of the NCH in its size, proportions and orientation. This square connects Center valley with

Naujamiestis and becomes the pinpoint on the routs leading to NCH as well.

Architectural concept

Key words: Rotunda, Column, Entablement

Main volumetric/spatial principle of the building - park rotunda. The main hall is composed using simple generalized planes. The Small hall glides over the entrance space. The two are joined by the entablement at the top.

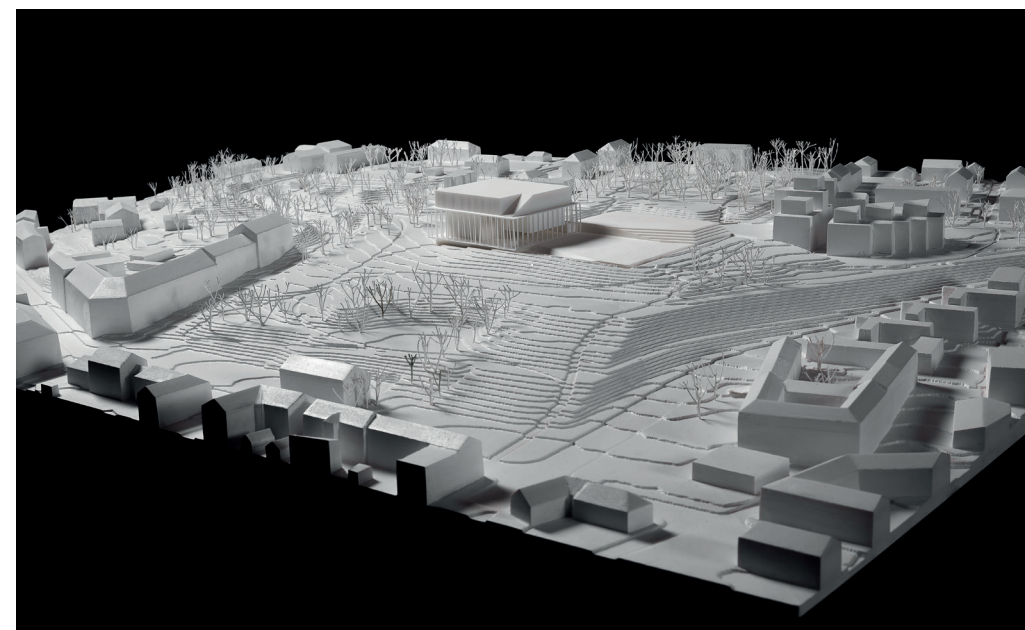

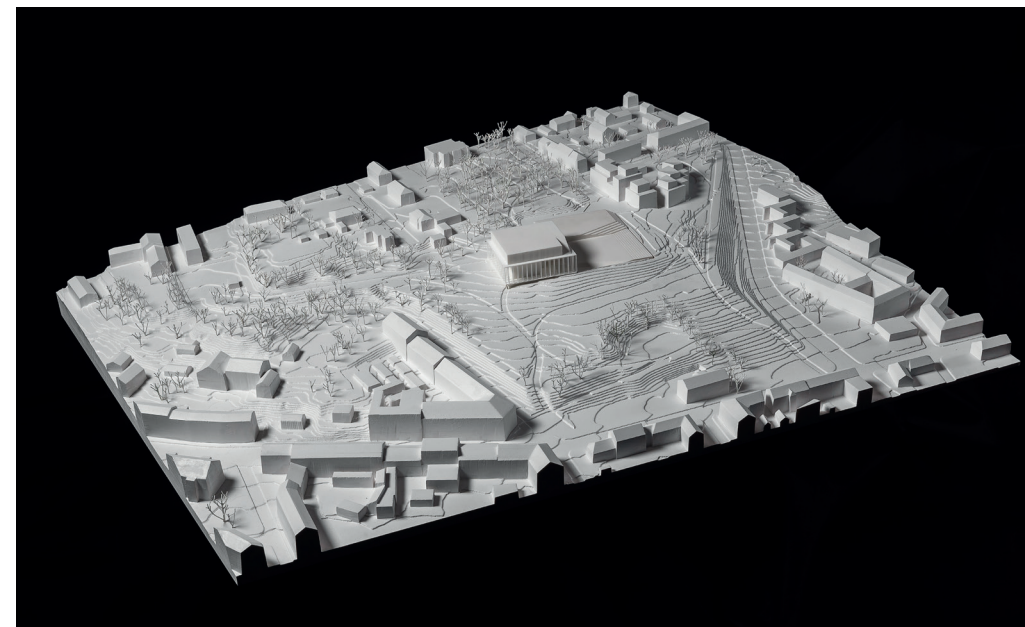

Two layers of columns surrounds this solid sculptural composition. Building size, proportions, volumetric composition are characteristics to those of historic Vilnius buildings like National library, National Opera theatre. The rotunda composition also refers to Lukiškių square and moreover to eternal Vilnius valley compositional principle- rounding by tree openwork.

THE VIEWS OF THE NATION

STATEMENT

The views of the Nation

With the “Views of the Nation”, it will be the first time that Vilnius will be able to see Lithuania from a public place.

In the main cities of Europe, viewpoints with panoramic views are the most successful touristic attractions, activating the public spaces around them. The fact that the New Kaunas Concert Hall is on top of Tauras Hill is a great opportunity, not only for a Concert Hall but for a 360 View Point. The proposal takes advantage of Tauras Hill and the height of the site.

To maximise the full potential of the investment we propose a double building:

A National Concert Hall + A 360 Viewpoint.

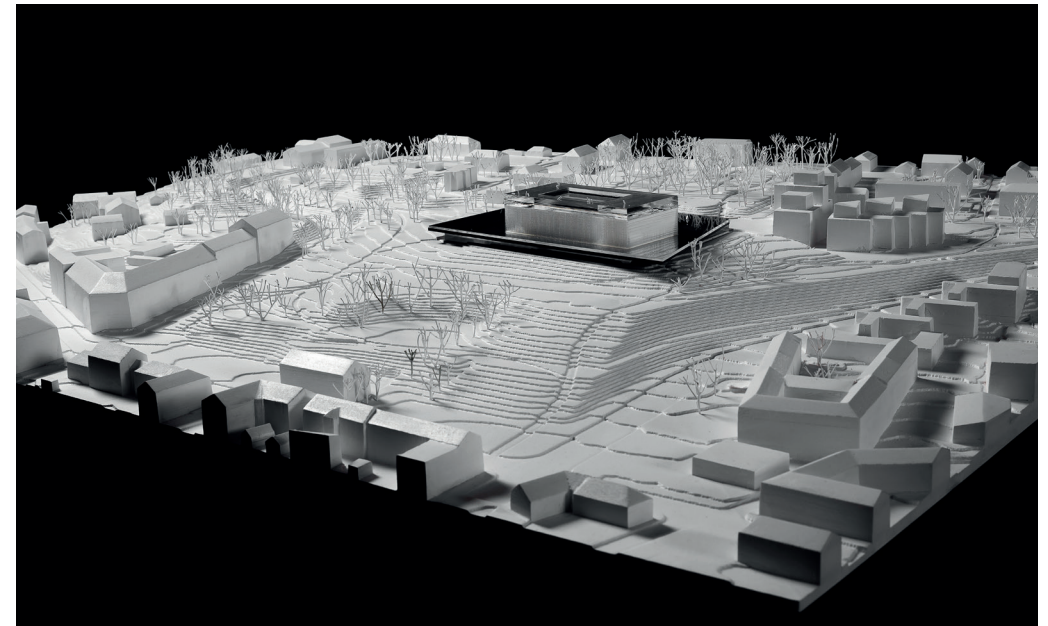

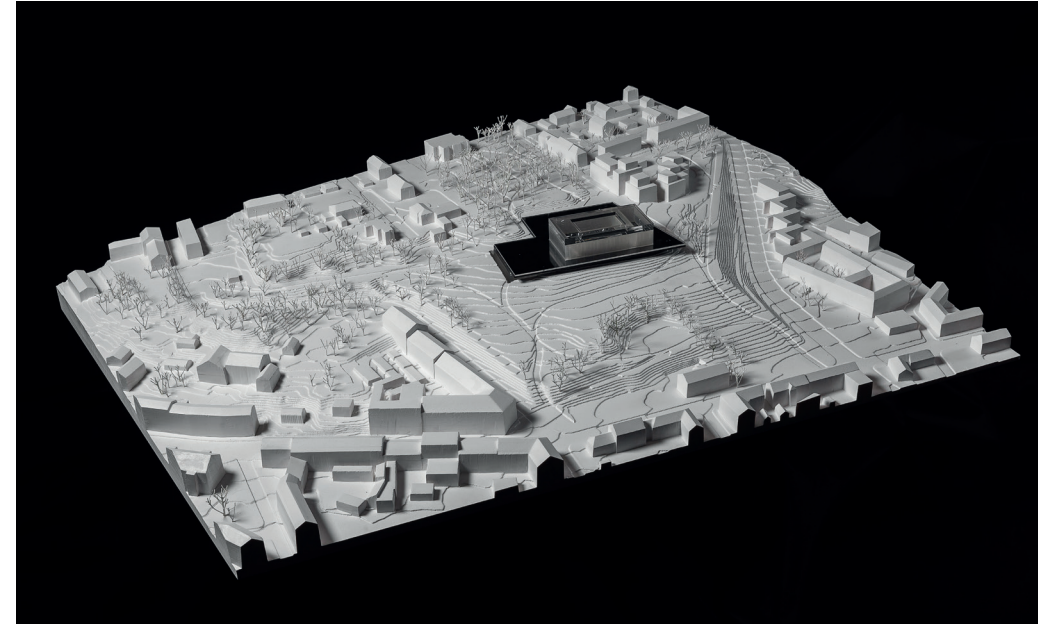

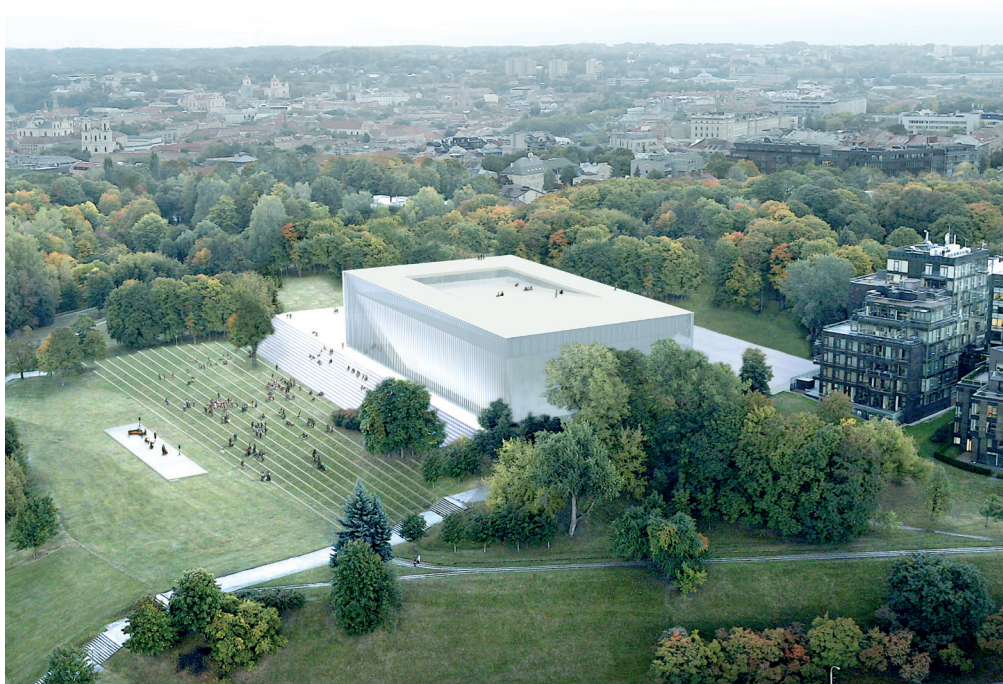

A direct public access to the 360 Viewpoint.

To explore the full potential of the intervention we propose three scenarios with different levels of investment. They range from the initial requirement of a single Concert Hall project to a common building, housing the Viewpoint and Public Outdoor space, with a connection to the park and and the underground parking.

A line drawing of a landscape. On the left, there is a tall, thin fence or wall. In front of it, there are two small, stylized trees. To the right of the fence, there is a low, horizontal line representing a path or a low wall. Further right, there are several trees of different sizes and shapes. On the far right, there is a building with a sloped roof. The drawing is simple and uses black lines on a white background.
