2023 Revision of the 2021 Edition

PREAMBLE

We, the architects, concerned for the future qualitative development of the **built environment** in a fast-changing world, believe that architecture involves everything that influences the way in which the **built environment** is planned, designed, made, used, furnished, landscaped, and maintained. We feel responsible for the improvement of the education and training of future architects to enable them to meet the expectations of 21st Century societies, worldwide, for sustainable human settlements in every cultural heritage.

We are aware of the fact that, in spite of the many outstanding and sometimes spectacular contributions of our profession, there is a surprisingly small percentage of the **built environment** which is actually conceived and realised by architects and planners. There is still room for the development of new tasks for the profession when architects become aware of the increasing needs identified and possibilities offered in areas which have not, up to now, been of major concern to the profession. Still greater diversity is therefore needed: in the products and processes of professional practice, in the demographic makeup of the personnel who exercise the profession, and, as a consequence, in architectural education and training. The basic goal of architectural education is to develop the architect as a well-informed, broadly prepared «generalist».

This is particularly true for those who are working in a developing context, where the architect could accept the role of a «facilitator», rather than that of a «provider» of services, and where the profession can meet new challenges. There is no doubt that the architect's capacity to solve problems can greatly contribute to tasks such as community development, self-help programmes, educational facilities, etc., and thus make a significant contribution to the improvement of the quality of life of those who are not accepted as citizens in their full right and who cannot be counted among the architect's usual clients.

The aims of this Charter are that it be used, in the first instance, for the creation of a global network of architectural education within which individual achievements can be shared by all, and that it will enhance the understanding that architectural education addresses some of the most significant environmental and professional challenges of the contemporary world.

We therefore declare:

- 0 That a quality education in architecture must prepare architects to formulate new solutions for the present and the future, as new eras will bring with them grave and complex challenges with respect to the social and functional degradation of many human settlements. These challenges may include many of the elements incorporated in the United Nations Sustainable Development Goals, including global urbanization and the consequent depletion of existing environments, a severe shortage of housing, urban services and social infrastructure, the effects of all of these on the public health and well-being, and the increasing exclusion of architects from built environment projects. (*Reference: https://sdgs.un.org/goals*)
- 1 That architecture, the character and quality of buildings and the way they relate to their cultural contexts and natural surroundings, respect for the natural and built environment, as well as the collective and individual cultural heritage are matters of public concern.
- 2 That it is in the public interest and central to the public health –including physical and psychological well-being-- to ensure that architects are able to understand regional characteristics and to give practical expression to the needs, expectations and improvement to the quality of life of individuals, social groups, communities and human settlements, advocating, through their work, for equitable and inclusive environments, clean water, accessible and renewable energy, resilient and innovative infrastructures, sustainable cities and communities, region-specific climate action, and responsible stewardship of our natural and built environment.
- 3 That methods of education and training for architects are varied in order to develop a cross-cultural understanding and cultural richness and to allow for flexibility and encourage innovation in the development of curricula that respond to the changing demands and requirements (including methods of project delivery) of the client, the users, the construction industry, the architectural profession, and the greater public good, whilst being aware of the political and financial motivations behind such changes.
- 4 That, subject to recognition of the importance of regional, environmental, and cultural customs and practices and the need for differences in curricula to accommodate these variations, a common ground exists within the pedagogical methods used around the world. That nurturing and establishing corresponding transdisciplinary capabilities, will enable countries, architecture schools and professional organizations to evaluate and improve the education given to future architects.
- 5 That the increasing mobility of architects between different countries calls for mutual recognition or validation of individual degrees, diplomas, certificates, and other evidence of formal professional qualification.
- 6 That the mutual recognition of degrees, diplomas, certificates, or other evidence of formal qualification to practice in the field of architecture must be based on objective criteria, guaranteeing that holders of such qualifications have received and continue to maintain the kind of education and training called for in this Charter.

I. GENERAL CONSIDERATIONS

- 7 That the vision of the future world, cultivated in architecture schools, should include the following goals, which draw upon the ethos of the 17 United Nations Sustainable Development Goals (*Reference: https://sdgs.un.org/goals*):
 - A decent, healthy, just, safe, equitable, accessible, sustainable, and resilient quality of life for all the inhabitants of human settlements.
 - A technological application for development which respects the social, cultural and aesthetic needs of people and is cognizant of the appropriate use of materials in architecture and infrastructure, and their initial and future maintenance costs.
 - An ecologically balanced and sustainable development of the built and natural environment including the rational utilisation of available, and where possible, renewable resources.
 - A diverse, equitable and inclusive built environment which is valued as the common heritage, property and responsibility of everyone.
- 8 That issues related to architecture, the environment, and the public health and well-being should be introduced as part of the general education at primary and secondary schools, because an early awareness of the **built environment** is important to future architects, clients, and users of buildings – as well as to the public at large.
- 9 That systems for continuing professional development should be set up for architects, as architectural education should never be considered a closed process but one in which life-long learning occurs.
- 10 That architectural heritage education is essential to:
 - Understanding sustainability, resilience, the social context, and sense of place in building design, and
 - Transforming the professional architectural mentality so that its creative methods are part of a continuous and harmonious cultural process (Refer to Appendix X, *UIA Paper on Heritage Education*, of UIA Education Commission Reflection Group 7, on Heritage Education, Torino 2008).
- 11 That cultural diversity, which is as necessary for humankind as biodiversity is for nature, is the common heritage of all humanity, and should be recognized and understood, for the benefit of present and future generations. (Refer to the UNESCO Universal Declaration on Cultural Diversity of November 2001, http://unesdoc.unesco.org/images/0012/001271/127160m. pdf).

- 0 That architectural education develops the capacity in students to be able to conceptualise, design, understand and realise the act of building within a context of the practice of architecture which balances the tensions among emotion, reason, and intuition, and which gives physical form to the needs of society and the individual.
- 1 That architecture is a discipline which draws knowledge from the humanities, the social and the physical sciences, technology, environmental sciences, the creative arts, and the liberal arts.
- 2 That education leading to formal qualifications and permitting professionals to practice in the field of architecture must be guaranteed to be at university/tertiary level with the discipline of architecture as the main subject and be available at universities, polytechnics, and academies. This education must maintain a balance between theory and practice.

3 That architectural education includes the following fundamental objectives:

- 3.1. Ability to create architectural designs that satisfy both aesthetic and technical requirements.
- 3.2. Adequate knowledge of the history and theories of architecture and the related arts, technologies, and human sciences.
- 3.3 Knowledge of the fine arts as an influence on the quality of architectural design.
- 3.4. Adequate knowledge of urban design, planning and the skills involved in the planning process.
- 3.5. Understanding of the relationship between people and buildings, and between buildings and their environment, and of the need to relate buildings and the spaces between them to human needs and scale.
- 3.6. Understanding of the profession of architecture and the role of the architect in society, in particular in preparing briefs that take account of social factors.
- 3.7. Understanding of the methods of investigation and preparation of the brief for a design project.
- 3.8. Understanding of the structural design, construction and engineering problems associated with building design.
- 3.9. Adequate knowledge of physical problems and technologies and of the function of buildings so as to provide them with internal conditions of comfort and protection against the climate.
- 3.10. Design skills necessary to meet building users' requirements within the constraints imposed by cost factors and building regulations.
- 3.11. Adequate knowledge of the industries, organisations, regulations, and procedures involved in translating design concepts into buildings and integrating plans into overall planning.
- 3.12. Understanding of professional and disciplinary responsibilities toward human, social, cultural, urban, architectural, and environmental values as well as architectural heritage --including the health, safety, and welfare of the public; and the physiological and psychological aspects of public health and well-being. These responsibilities also include a commitment to equity, diversity, and inclusivity in both the content and the context of architectural instruction.
- 3.13. Knowledge of the means of achieving ecologically responsible design, environmental conservation, and rehabilitation, with a focus on relevant aspects of the 17 United Nations Sustainable Development Goals (*Reference: https://sdgs.un.org/goals*).
- 3.14. Ability to demonstrate a creative competence in building techniques, founded on a comprehensive understanding of the disciplines and construction methods related to architecture.
- 3.15. Knowledge of project financing, project management, cost control and methods of project delivery.
- 3.16. Understanding of research and pedagogical methodologies, including those of transdisciplinary knowledge action and knowledge transferability as inherent parts of architectural learning, for both students and teachers.

II. OBJECTIVES OF ARCHITECTURAL EDUCATION

4. That architectural education involves the acquisition of the following capabilities:

4.1. DESIGN

- Ability to engage imagination, think creatively, innovate and provide design leadership.
- Ability to gather information, define problems, apply analyses and critical judgement, and formulate strategies for action.
- Ability to think three-dimensionally in the exploration of design.
- Ability to reconcile divergent factors, integrate knowledge and apply skills in the creation of a design solution.

4.2. KNOWLEDGE

4.2.1. Cultural and Artistic Studies

- Ability to act with knowledge of historical and cultural precedents in local and world architecture.
- Ability to act with knowledge of the fine arts as an influence on the quality of architectural design.
- Understanding of heritage issues in the built environment.
- Awareness of the links between architecture and other creative disciplines.
- Understanding the implications of the UN Sustainable Development Goals for architecture education. (*Reference: https://sdgs.un.org/goals. See also 4.2.2 Social + 4.2.3 Environmental Studies, below*)

4.2.2. Social Studies

- Ability to act with knowledge of society, and to work with clients and users that represent society's needs
- Ability to develop a project brief through definition of the needs of society users and clients, and to research and define contextual and functional requirements for different types of built environments.
- Understanding of the social context in which built environments are procured, of ergonomic and space requirements and issues of equity and access.
- Awareness of the relevant codes, regulations and standards for planning, design, construction, health, safety and use of built environments.
- Awareness of philosophy, politics, and ethics as these are related to architecture.

4.2.3. Environmental Studies

- Ability to act with knowledge of natural systems and built environments.
- Understanding of conservation and waste management issues.
- Understanding of the life cycle of materials, issues of ecological sustainability, environmental impact, design for reduced use of energy, as well as passive systems and their management.
- Awareness of the history and practice of landscape architecture, urban design, as well as territorial and national planning and their relationship to local and global demography and resources.
- Awareness of the management of natural systems taking into account natural disaster risks.

4.2.4. Technical Studies

- Technical knowledge of structure, materials, and construction.
- Awareness of the impact of geotechnical conditions on construction
- Understanding of the impact of climate on urban and architectural design and construction.
- Ability to act with innovative technical competence in the use of building techniques and the understanding of their evolution.
- Understanding of the processes of technical design and the integration of structure, construction technologies and services systems into a functionally effective whole.
- Understanding of services systems as well as systems of transportation, communication, maintenance, and safety.
- Awareness of the role of technical documentation and specifications in design realisation, and of the processes of construction, cost, planning and control.

4.2.5. Design Studies

- Knowledge and experimentation of design theory and methods.
- · Ability to demonstrate the capacity to integrate disparate areas of knowledge through design
- Understanding of design procedures and processes.
- Knowledge of design precedents and architectural criticism.
- Ability to work effectively across scales

4.2.6. Professional Studies

- Understanding of the leadership role of architects in the creation of the built environment.
- Understanding of different forms of procurement of architectural services.
- Understanding of the fundamental workings of the construction and development industries, such as finance, real estate investment and facilities management.
- Understanding of the potential roles of architects in conventional and new areas of activity and in an international context.
- Understanding of the role of the architect in responding to the public health, safety and welfare conditions that arise from conflict and/or natural disaster.
- Understanding of business principles and their application to the development of built environments, project management and the functioning of a professional consultancy.
- Understanding of professional ethics and codes of conduct as they apply to the practice of architecture and of the architects' legal responsibilities where registration, practice and building contracts are concerned.

4.3. SKILLS

- Ability to work in collaboration with other architects and members of interdisciplinary teams.
- Ability to act and to communicate ideas through collaboration, speaking, numeracy, writing, drawing, modelling and evaluation.
- Ability to utilise manual, electronic, digital, graphic and model making capabilities to explore, develop, define and communicate a design proposal.
- Understanding of systems of evaluation, that use manual and/or electronic means for performance assessments of built environments.

5. RECOMMENDED QUANTITATIVE INDICATORS:

5.1. As a rule, the balanced acquisition of subjects and capabilities cited in Sections II.3 and II.4 requires a period of not less than five (5) years of full-time studies in an accredited/validated Study Programme at University or an equivalent institution. Where possible, within the curricula of architectural education, students should be afforded opportunities for internship/placement/engagement with a range of professional practice modalities.

5.2. As a rule, graduates of accredited/validated architecture programmes will be required to have completed at least two (2) years of acceptable experience/training/ internship, prior to registration/ licensing/certification to practice as an architect while allowing flexibility for the regulatory requirements of their national contexts.

To achieve the above-mentioned objectives, the following conditions and requirements should be taken into account:

- 1. That adequate studios, laboratories, facilities for research, advanced studies, libraries, information and data exchanges for new technologies should be provided at schools of architecture.
- 2. That in order to promote a common understanding and to raise the level of architectural education, the creation of a network, on a worldwide basis, for the exchange of information, teachers and senior students is as necessary as a regional network to promote an understanding of diverse climate, materials, vernacular practices and culture. The use of external examiners is a recognised method of achieving and maintaining comparable national and global standards.
- 3. That each teaching institution must adjust the number of students according to its teaching capacity and the selection of students shall be in relation to the aptitudes required for a successful education in architecture, and this will be applied by means of an appropriate selection process at the point of entry into each academic programme.
- 4. That every effort be made to ensure that each teaching institution demonstrates a diverse, equitable and inclusive community of students, academic faculty and supporting staff.
- 5. That teacher/student numbers must reflect the design studio teaching methodology required to obtain the above capabilities as studio teaching should be a major part of the learning process.
- 6. That individual project work with direct teacher/student dialogue should form the basis of the learning period, continuous interaction between the practice and teaching of architecture must be encouraged and protected and design project work must be a synthesis of acquired knowledge and accompanying skills.
- 7. That the development of conventional drawing skills is still a requirement of the educational programme and modern personalised computer technology, and the development of specialised software makes it imperative to teach the use of computers in all aspects of architectural education.
- 8. That research and publication should be regarded as an inherent activity of architectural educators and may encompass applied methods and experiences in architectural practice, project work and construction methods, as well as academic disciplines.
- 9. That education establishments should create systems for self-evaluation and peer review conducted at regular intervals including in the review panel, appropriately experienced educators from other schools or other countries and practicing architects or participate in the approved UNESCO-UIA Validation System or a recognized, equivalent system.
- 10. That education should be formalised by an individual's demonstration of capabilities by the end of the programme of studies, the principal part being a presentation of an architectural project demonstrating the acquired knowledge and concomitant skills. For this purpose, juries should constitute an interdisciplinary team, including examiners external to the school who may be practitioners or academics from other schools or countries but who must have interest, experience, and expertise in the assessment process of architectural skills at the capstone level.
- 11. That in order to benefit from the wide variety of teaching methods, including distance learning, exchange programmes for teachers and students at advanced levels are desirable. Final projects could be shared among architecture schools as a means of facilitating comparison between results and self-evaluation of teaching establishments, through a system of international awards, exhibitions, and publications in an array of modalities, including on the internet website.

IV.CONCLUSION

This Charter was created on the initiative of UNESCO and the UIA to be applied internationally to architectural education. It needs the guarantee of protection, development, and urgent action.

The Charter constitutes a framework providing direction and guidance to students and teachers of all establishments involved in education and training in architecture and planning. It is conceived as a «dynamic» document that will be revised regularly, thus taking into consideration new orientations, needs and developments in professional practice, as well as in education systems.

Beyond all aesthetic, technical and financial aspects of the professional responsibilities, the major concerns, expressed by the Charter, are the social commitment of the profession, i.e., the awareness of the role and responsibility of the Architect in his or her respective society, as well as the improvement of the quality of life through sustainable human settlements.

2023 EDITION 2023 Sexennial revision with significant modifications of the 2017 Edition

2021-2023 Revision. UNESCO-UIA VALIDATION COUNCIL FOR ARCHITECTURAL EDUCATION (VCAE) Authors: José Luis Cortés, UIA President, and Jana Revedin, UNESCO; Co-Presidents, Validation Council for Architectural Education (VCAE); Marilys R. Nepomechie, USA, and Ashraf Salama, Egypt, Co-Reporters, VCAE and Co-Directors, UIA Education Commission (EDUCOM)

UIA EDUCOM and VCAE Members 2021-2023:

Region I: Natalina Da Costa, France; Antonia Postorino, Italy

Region II: Vladimir Slapeta, Czech Republic; Fani Vavli, Greece; Balint Bachmann, Hungary; Nodar Amashukeli; Georgia; Wassim El-Nagi, Lebanon; Raluca Monteanu, Romania; Deniz Incedayi, Turkey; Konstantin Kiyanenko, Russia; Olena Olynik, Ukraine

Region III: Pedro da Luz Moreira, Brazil; Francisco Herrera, Chile; Jadille Baza, Chile; Tatiana Vidal, Chile; Juan Alejandro Croswaite-Ferro, Colombia; Marcelo Danza, Uruguay

Region IV: Nuno Soares, Macao; Xiangning Li, China; XiaoXiang, China; Tong Zhang, China; Sing Yeung Sunnie Lau, Hong Kong; Kaname Yanagisawa, Japan; Bindu Shrestha, Nepal; Jinwook Kim, South Korea

Region V: Vity Nsalambi, Angola; Anihouvi Christelle Bokossa, Benin; Souleyman Breme Ahmat, Chad; Iman Gawad, Egypt; Daniel Duah, Ghana; Tokunbo Omisore, Nigeria; Susan Kibue, Kenya; Vineet Sharveen Kumar Luckoo, Maritius; Wafae Belarbi, Morocco; Abimbola Ajayi, Nigeria; Emna Bchir, Tunisia; Katongo Mulenga, Zambia

CHRONOLOGY | Charter Revisions:

The UNESCO-UIA Charter, initially approved in 1996, was drafted by a group of ten experts, coordinated by Fernando Ramos Galino, Spain, including : Lakhman Alwis, Sri Lanka, Balkrishna Doshi, India, Alexandre Koudryavtsev, Russia, Jean-Pierre Elog Mbassi, Benin, Xavier Cortes Rocha, Mexico, Ashraf Salama, Egypt, Roland Schweitzer, France, Roberto Segre, Brazil, Vladimir Slapeta, Czech Republic, and Paul Virilio, France.

It was revised in 2003-2005 by the UNESCO-UIA Validation Council for Architectural Education (VCAE). Authors: Jaime Lerner, Brazil, UIA President and Wolf Tochtermann, UNESCO, Co-Presidents of VCAE; Fernando Ramos Galino, Spain, VCAE General Reporter and Director, UIA Education Commission (EDUCOM); Brigitte Colin, UNESCO, and Jean-Claude Riguet, France, UIA Secretary General.

2003-2005 VCAE Regional Members:

Region I: Paul Hyett, United-Kingdom, Roland Schweitzer, France, Alain Viaro, Switzerland Region II: Alexandre Koudryavtsev, Russia, Alexandru Sandu, Romania, Vladimir Slapeta, Czech Republic Region III: Sara Maria Giraldo Mejia, Colombia, Enrique Vivanco Riofrio, Ecuador James Scheeler, USA Region IV: Louise Cox, Australia, Nobuaki Furuya, Japan Region V: Ambrose A. Adebayo, South Africa, Said Mouline, Morocco, Zakia Shafie, Egypt The text was revised in 2008-2011 by the UNESCO-UIA Validation Council for Architectural Education (VCAE). Authors: Louise Cox, Australia, UIA President, Wolf Tochtermann, UNESCO, Co-Presidents of VCAE; Fernando Ramos Galino, Spain and Sungjung Chough, R. of Korea, VCAE Co-Reporters and Co-Directors, UIA Education Commission (EDUCOM)

2008-2011 VCAE Regional Members:

Region I: Roland Schweitzer, France, Alain Viaro, Switzerland,

Region II: Alexandre Koudryavtsev, Russia, Vladimir Slapeta, Czech Republic

Region III: Norma Patricia Mora Morales, Costa Rica, Kate Schwennsen, USA

Region IV: Nobuaki Furuya, Japan

Region V: Rodney Harber, South Africa, Zakia Shafie, Egypt

In collaboration with the following members, **Reflection Groups of the UIA Education Commission: Region I:** Giorgio Cirilli, Italy, Jörg Joppien, Germany; **Region II:** Nana Kutateladze, Georgia, **Region III:** James Scheeler, USA; Hector Garcia Escorza, Mexico; **Region IV:** George Kunihiro, Japan; **Region V:** Magda Mostafa, Egypt, Seif A. Alnaga, Egypt

The text was revised in 2014-2017 by the UNESCO-UIA Validation Council for Architectural Education (VCAE). Authors: Esa Mohamed, UIA President, Jana Revedin, UNESCO, Co-Presidents of VCAE; Fernando Ramos Galino, Spain, and Kate Schwennsen, VCAE Co-Reporters and Co-Directors, UIA Education Commission (EDUCOM)

2014-2017 VCAE Regional Members:

Region I: Lorenz Bräker, Switzerland, Béatrice Laville, France, Roland Schweitzer, France

Region II: Deniz Incedayi, Turkey, Olena Olynik, Ukraine, Vladimir Slapeta, Czeck R., Fani Vavili, Greece

Region III: Norma Patricia Mora Morales, Costa Rica

Region IV: Nobuaki Furuya, Japan, Nuno Soares, Macao

Region V: Mohamed Chaoui, Morocco, Jean-Jacques Kotto, Cameroun, Hoda El Masry, Egypt, Magda Mostafa, Egypt, Vity Nsalambi, Angola, Rodney Roy Harber, S. Africa

The text was revised in 2017-2021 by the UNESCO-UIA Validation Council for Architectural Education (VCAE). Authors: Thomas Vonier, UIA President, Jana Revedin, UNESCO, Co-Presidents, VCAE; Magda Mostafa, Egypt, and Marilys R. Nepomechie, USA, VCAE Co-Reporters and Co-Directors, UIA Education Commission (EDUCOM)

2017-2020 VCAE Regional Members:

Region I: Béatrice Laville, France; Jose Manuel Pereirinho; Michel Proces, Belgium

Region II: Ivan Danov, Bulgaria; Fani Vavli, Greece; Deniz Incedayi, Turkey, Olena Olynik, Ukraine, Vladimir Slapeta, Czech Republic; Balint Bachmann, Hungary; Sabina Hajiyeva, Azerbaijan

Region III: Pedro da Luz Moreira, Brazil, Aufusto Xavier Ballen Rey, Colombia; Fabian Farfan, Bolivia

Region IV: Nobuaki Furuya, Japan; Nuno Soares, Macao; Wu Jiang, China; Zhang Tong, China; Ching So, Hong Kong; Alok Ranjan, India; Divya Kush, India; Yong Seung Kim, South Korea; Mohd Zulhemlee An, Malaysia; Sriram Bhagut Mathe, Nepal

Region V: Jean-Jacques Cotto, Cameroon; Vity Nsalambi, Angola; Tokunbo Omisore, Nigeria; Susan Kibue, Kenya; Ashraf Salama, Egypt; Henry M. I. Mwoleka, Tanzania
